

Quentor Cases Product News

Quentor Track Shack:

**transportable
storage
and workspace**

Established in 1972, Quentor have become one of the leading suppliers of specialist transportation systems. In 1997 Quentor reinvented the flight case with the launch of weight-saving aluminium honeycomb versions under the System Q branding. It now extends their functionality with the introduction of Track Shacks: transportable workspace and storage that's designed for convenient handling. Their uses include mobile workshops, studios, stores, offices, meeting rooms, electronic areas and kitchens.

Quentor customers have already flown them around the world and have given them commendations for functionality, mobility and improved efficiency. They can be produced in corporate colours or to match existing transit cases and there are endless marketing opportunities for large scale graphics. Track Shacks have applications in any industry where transportable workspace is required.

Construction

The walls and roof are constructed using double-wall thickness aluminium honeycomb and aluminium extrusion exclusive to Quentor. The floor consists of joists supporting two sheets of aluminium honeycomb with a further box section between them. These are held together using both mechanical and bonding systems to produce an immensely strong base. Track Shacks are designed and panels cut using modern CNC methods and assembled using advanced bonding techniques.

Handling

Quentor's flexible Track Shacks are compatible with aircraft pallet sizes and designed to work with Quentor's case palletisation programmes, including

roof cases to maximise upper deck aircraft pallet space.

They can be used individually or linked together to provide larger working areas and greater functionality for less weight than the same volume of cases. Track Shacks are usually moved complete with their aircraft pallets by forklift. Quick release removable wheel assemblies are provided for manoeuvring the complete unit. During loading or whilst in operation the Track Shack would normally be supported on timbers.

Interiors:

**designed
&
constructed
to meet your exact
requirements**

Quentors qualified team of designers work with you to design an interior that will not only be functional to your industry but will also have a superior and modern appearance.

Interior fitting

The interior of a Quentor Track Shack can be fitted out to meet individual operating requirements. It can include:

- ◆ Work benches
- ◆ Desk tops
- ◆ Proprietary Drawer systems
- ◆ Quentor's lightweight drawers
- ◆ Overhead lockers
- ◆ Storage cupboards
- ◆ Bin compartments
- ◆ Built in services
- ◆ External work tables
- ◆ Exterior graphics
- ◆ Travelling cover
- ◆ Access ramps

Interior finish

The interior includes high gloss finish walls and a choice of floor surfaces. Services such as cabling, hoses, etc. are contained within high quality trunking with a very smart appearance. Worktops and lockers are available in colours to meet your marketing requirements.

Particular attention is paid to providing a well illuminated environment with overhead ceiling level lighting and under-locker lighting for work surfaces.
