

Quentor Cases Product Information

Garage cabinets

High profile, strong and lightweight

Quentor manufacture high profile garage cabinets specifically designed to meet the operating requirements of individual motor racing teams and to compliment their garage styling.

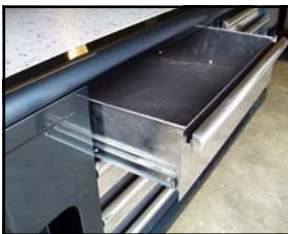

Garage cabinets usually occupy a very prominent position in the garages of major motor racing teams, providing a combination of workstation and tool trolley for race engineers. Quentor are proud to have been chosen to produce cabinets for major F1 names, designing and building to their exact requirements.

Construction:

Each unit is based upon a lightweight aluminium honeycomb substructure to

provide considerable strength. All teams have different requirements but typically garage cabinets may include storage for wheel guns and hose reels, power sockets, paper towel dispensers, waste bins and fabricated lightweight aluminium drawer units installed with high grade double extension slides.

Exterior panels and work tops are moulded in GRP, painted and polished to a very high standard to customers' requirements. Worktops are inlaid with a co-ordinating laminate panel. Units are fitted with heavy duty castors for ease of movement and are provided with a removable fabricated front trim skirt to hide them away during use. Flight cases are available to ensure that the cabinets travel securely.

Cabinets are also available for areas such as catering, marketing & promotion or other engineering functions.
